ABOUT ME

I am a dedicated and results-driven IT professional with a solid academic foundation and practical expertise in networking and systems engineering. I have successfully completed an HNC and HND with a focus on networking, which provided me with a strong technical base. Building on that, I achieved a BSc (Hons) in Computing with Merit and am now excelling at the BSc (Hons) level with high marks. My educational journey has honed my skills in network configuration, system troubleshooting, cloud computing, and IT infrastructure management.

I am passionate about leveraging my technical knowledge and hands-on experience to solve complex challenges and drive continuous improvement. I am eager to contribute as a System Engineer, where I can apply my analytical abilities, commitment to excellence, and innovative mindset in a dynamic and forward-thinking organization.

PROJECTS

SMART MIRROR

Project Overview & Outcome

- Developed an AI-powered smart mirror utilizing Raspberry Pi that serves as an interactive display, providing real-time information and responding to voice commands. This project integrates various technologies to enhance user engagement and functionality.
- This project significantly enhances the user experience by incorporating voice recognition.
- It demonstrates innovative applications of IoT technology in interactive displays.
- It showcases the potential for smart home solutions that blend functionality with modern technology.

TECHNICAL

Network Design and Planning

Proficient in understanding network architecture and topology, including the design and implementation of Local Area Networks (LANs), Wide Area Networks (WANs), and Virtual Private Networks (VPNs). Skilled in assessing organizational needs to create efficient, scalable network solutions.

Network Configuration and Management

Experienced in configuring and managing routers, switches, and firewalls. Proficient in setting up and maintaining essential services like DHCP and DNS, ensuring optimal network performance and security.

Linux System Administration

Expert in Linux system administration, including installation, configuration, and maintenance of Linux servers. Familiar with shell scripting and system optimization to enhance performance and streamline processes.

Monitoring & Logging

Skilled in implementing monitoring and logging solutions to track system performance and security. Proficient in using tools to analyze logs and provide actionable insights for proactive system management.

Cloud Networking

Experienced in cloud networking concepts and technologies, including the integration of cloud services into existing infrastructure. Skilled in deploying and managing cloud-based solutions to enhance scalability and flexibility.

EDUCATION

Bachelor of Science (Hons) in Computing

Edinburgh Napier University, UK at Info Myanmar Collage

2023 - 2025

High National Diploma in Computing (Networking Engineering)

Pearson BTEC, UK at Info Myanmar Collage

2020 - 2023

High School Graduate

Winners Academy School

2019 - 2020

SKILLS

Hard Skills

Network Design, Network Planning, Router Configuration, DNS, DHCP, Switch Configuration, Logging, Firewall Configuration, Virtual Private Network, Shell Scripting, Linux Administration, Cloud Networking, Cloud Services Deployment, Wide Area Network, Local Area Network, System Monitoring.

Soft Skills

Analytical Thinking, Problem Solving, Adaptability, Communication, Teamwork, Attention to Detail, Time Management, Continuous Learning

LANGUAGES
